Amanda Cavanagh tests modified tobacco plants in a specialized greenhouse to select ones with genetic designs that boost the yield of key food crops. ActionBioscience - promoting bioscience literacy When combining two crops using standard agricultural techniques, genes are allowed to mix at random. A typical example is Triticale, a synthetic hybrid between wheat and rye grown in Europe, which is the result of combining 50,000 largely untested genes, 25,000 from each species. 10 GM crops, in contrast, have specific genes inserted to produce the same desired effect.
